

# LIFELADDER

by port:safety

**The safety equipment  
game changer**

LifeLadder is an innovative safety ladder for quay walls, **improving safety** at ports globally.

It is made of **maintenance free**, reinforced synthetic modules in a bright, yellow color that ensures visibility during daytime.

Solar-powered LED lights provide visibility at night and clear direction to safety.

#### Unique features:

- Improved safety
- Visible 24/7
- Maintenance free
- Reduced costs
- Reusable parts

The modular construction delivers improvements in **sustainability**, as repairs only involves replacing damaged modules rather than replacing an entire ladder.

## Early break even Lifetime safety upgrade

LifeLadder is not only a safer solution. It offers a reduced Total Costs of Ownership.

## Easy installation

**Suitable for manual handling**  
**3.6 m LifeLadder weighs 19.5 kg**

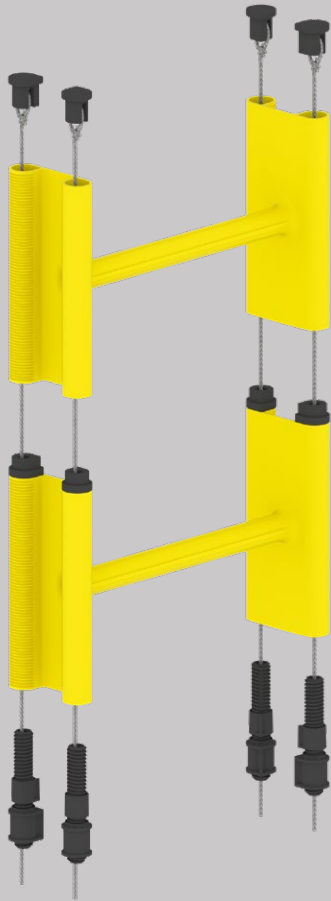

A yellow safety ladder is mounted vertically on a grey metal structure. The ladder has black rungs and is illuminated from above, casting a bright glow. To the right, a white chain is attached to the structure. The background shows a blurred industrial port environment with cranes and structural beams. The floor is dark and reflective, showing the ladder's reflection.

*The idea of a non corrosive and better visible ladder is a great idea. It is a simple solution and I am surprised it has not already been implemented somewhere around the world.*

Port operations and insurance

**Safety upgrade**  
**Reduced costs**

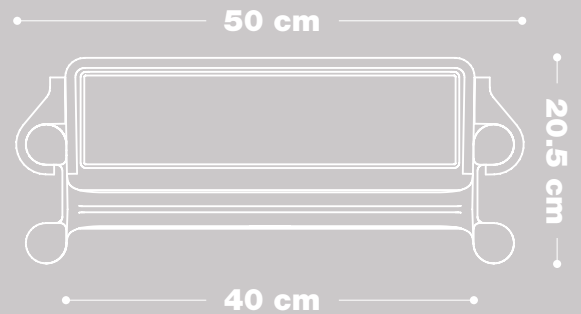

# Maintenance free

— **Main modules**  
High strength

— **Spacers**  
Compressible

— **Ropes**  
Static, 2 ton each

LifeLadder is **dimensioned** to comply with European Standard EN 14329

The invention behind LifeLadder is **covered** by Pending Patent Application no. EP17166906.2
